NIFTY

STRATEGIES:- "Despite registering a bullish candle on the weekly charts, momentum appears to be weakening as trading range for the entire month remained 356 points, which can be a cause for concern,"

If the index manages a close below 11,990 levels in the next couple of sessions, then a correction shall get accelerated further, he said. In that scenario, an ideal target on downsides can initially be around 11,800.

For the time being, upsides shall remain capped around 12,160 levels unless the Nifty witnesses a strong breakout above the said level, Traders are advised to remain neutral on the long side, whereas shorting can be considered on a close below 11,990 for a target of 11,800.

BANK NIFTY

STRATEGIES:- The Nifty Bank was also caught in a bear trap but the fall was softer compared to the Nifty. The index fell 0.55 percent to close at 31,946.10 and formed a bearish candle on the daily charts, but bullish candle pattern on the weekly scale. It gained 2.7 percent during the week.

"The banking index took support around its previous swing high of 31,783 and rebounded piercingly, which is a positive sign for the index,"

"It made higher high for the seventh consecutive week and formed a big green candle on the weekly chart, which clearly shows strength in the index. Until it sustains above 31,783 levels, an upmove towards 32,500 and 32,800 levels cannot be ruled out."
