STRATEGIES:- The Nifty50 bounced back from its swing low of 11,614 recorded on February 3 to reclaim 12,000 levels. However, it failed to close above 12,100, and 50-Days Moving Average placed at 12,118 on the daily charts. The Nifty index consolidated in a range of 50 points for the most part of the session and formed a Bearish Candle on the daily scale. But, it formed a bullish candle on a weekly scale. If we combine the price action of the last two weeks, we are seeing a Bullish Piercing pattern on the weekly chart. At current juncture, supports are gradually shifting higher and now till the time, it holds above 12,050 level, we may see ongoing optimism towards 12,200 then 12,250 zones; while on the downside, major support is seen at 12,000 then 11,950 zones

STRATEGIES:- Bank Nifty index moved within the range of February 6 trading session and formed an Inside Bar pattern on the daily chart. While the banking index outperformed the benchmark index on the week-on-week basis and rallied by 4.63 per cent to form a Bullish Engulfing pattern on a weekly scale. "Formation of mentioned pattern around its 50 EMA on weekly chart certainly bodes well for the bulls. At the current juncture, it is sustaining well above the Falling Channel breakout level and 50 DEMA
